6in1 GIGABIT SERVER

As the world moves faster and faster, efficiency is now the key to success in our daily lives. Today people and businesses rely heavily on the technologies that help them speed up their entire business processes. The need to move, manage, access, secure, and store data has become far more important than ever. Synology has captured these needs and has incorporated them into our new Synology DS-101g+ which satisfies everyone's needs.

Synology DS-101g+ is a six in one server that provides widely used functions in most businesses and home networks. These functions include file sharing, FTP access, routine backups, printing service, photo browsing, and web hosting. Users within a network will have easy file access and file sharing by having the DS-101g+ acting as a File or a FTP server. File printing has become convenient than ever. Printers are now accessible to all users simply by connecting the printer to the DS-101g+. People love taking pictures with their digital cameras can now browse and share their favorite photos with their families and friends. Last but not the least, DS-101g+ provides a web hosting space that serves the needs of users who wish to share or advertise their personal or business web pages to people all over the world.
